Personal Finance Tracker — User Guide

A personal finance tracker for subscriptions, bills, income, and investments — with end-to-end encryption and a Telegram bot for quick access.

Getting Started

1. Open the web app

<https://sreeharimv.github.io/digiseva/>

The app works in any browser. On mobile, you can add it to your home screen for an app-like experience.

2. Create your account

1. Tap **New here? Register**
2. Enter your **name** (e.g. "Anu", "Sreehari")
3. Enter the **invite code** — ask the admin for this
4. Choose a **6-digit PIN** — this is your encryption key

⚠ **Your PIN is the only key to your data.** If you forget it, your data cannot be recovered by anyone — including the admin. Write it down somewhere safe.

3. Log in

Enter your name and 6-digit PIN on the lock screen. Your session stays active for **2 hours**, after which you'll need to enter your PIN again.

To lock manually, click the  button in the top-right corner.

What You Can Track

SECTION	WHAT GOES HERE
Subscriptions	OTT, cloud storage, SaaS, apps

SECTION	WHAT GOES HERE
Bills	Electricity, internet, LPG, maintenance
Income	Salary, freelance, rental, dividends
Expenses	EMIs, credit cards, one-time costs
Investments	Bank accounts, FDs, mutual funds, stocks, gold

Each entry tracks the amount, due date, payment method, and payment status for the current cycle.

Daily Use

- **Dashboard** — overview of this month's income vs outgo, upcoming dues, and portfolio snapshot
- **Mark as paid** — tap any entry and click **Mark Paid** to advance the due date to the next cycle
- **Search** — use the search bar to quickly find any entry
- **Export / Import** — download or upload your data as CSV from the sidebar

Telegram Bot

The bot lets you check your finances and mark payments without opening the web app.

Link your account

1. In the web app sidebar, tap **Link Telegram**
2. Click **Generate Code** — you'll get an 8-character code (valid for 10 minutes)
3. Open your Telegram bot and send: `/link YOURCODE`
4. Unlock the bot by sending your PIN: `/unlock 123456` Or just type your 6-digit PIN directly — the message is deleted automatically.

Bot commands

COMMAND	WHAT IT DOES
<code>/start</code>	Quick overview — income, outgo, due count
<code>/summary</code>	Full overview with overdue and upcoming items
<code>/list</code>	All entries grouped by type and category

COMMAND	WHAT IT DOES
<code>/due</code>	Items due in the next 7 days
<code>/overdue</code>	Overdue and unreceived items
<code>/paid</code>	Mark an item as paid or received
<code>/update</code>	Update any amount or bank balance
<code>/monthly</code>	Income and spend breakdown by category
<code>/investments</code>	Portfolio, bank balance, and returns
<code>/history</code>	Last 3 months of payment history
<code>/export</code>	Download your data as CSV
<code>/lock</code>	Lock your bot session immediately
<code>/help</code>	Show all commands

Bot sessions last **2 hours**. After that, send your PIN again to unlock.

Changing Your PIN

Sidebar → **Change PIN** → enter your current PIN, then your new PIN twice.

After a successful PIN change you'll be logged out and need to sign in with the new PIN.

Privacy & Security

- All sensitive data (names, amounts, categories) is **encrypted with your PIN** before being stored. The server only sees ciphertext.
- Your PIN is never stored — only an Argon2id hash is kept for verification.
- Sessions are short-lived (2 hours) and stored only in memory on your device.
- Telegram bot sessions are also in-memory and expire after 2 hours.
- The daily alert bot uses a separate server-side key so notifications work without your PIN.

Access Without Tailscale

The app is publicly accessible via GitHub Pages + a Cloudflare tunnel. No VPN needed.

If the tunnel URL has changed and the app shows a connection error, the URL usually refreshes within 5 minutes automatically.

DigiSeva is self-hosted on a home server. Your data never leaves your own infrastructure.
